

# Chiral nuclear forces: State of the art and future perspectives

Evgeny Epelbaum

*Institut für Theoretische Physik II, Ruhr-Universität Bochum, D-44780 Bochum, Germany*

May 19, 2014

I review the current status of nuclear forces derived in the framework of chiral effective field theory and discuss some recent applications to few-nucleon systems. A special emphasis will be put on the question of convergence of the chiral expansion as well as the ongoing efforts to increase the accuracy and applicability range of chiral EFT.
